DETAILED ACTION

This Office Action is in response to the RCE filed 22 April 2004.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 22 recites the limitation "ground via" in claim 22. There is insufficient antecedent basis for this limitation in the claim.

Allowable Subject Matter

Claims 2-7, 9-20 and 32-36 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 2-7, 9-20 and 32-36 are allowable because prior art does not show alone or in combination along with the limitations in the independent claims such as, substrate having a ground structure including, for each signal wiring, a pair of rectangular ground plane portions located on opposite sides of the second contact of that signal wiring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claim 25 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Newman (U.S. Patent 5,455,456).

Newman discloses a semiconductor device (Fig. 5) that contains a substrate having a plurality of signal wirings (614b), each having a first contact adapted to be connected to a respective terminal of an integrated circuit, and a second contact (516b) on a periphery of the substrate, the substrate having a signal via penetrating each second contact, a superstrate (502) formed of a dielectric material above the substrate and formed of the same material as the substrate, the superstrate having a respective opening therethrough above each second contact, a lid (548) above the superstrate, a bottom layer (512) of the package formed of a dielectric material, wherein the substrate has a plurality of ground vias (544) and partially surrounding the signal vias.
